

Invasiveness Rank

- 1 - highly invasive - may displace or replace native ecosystems
- 2 - aggressive - widespread, persistent, but may not replace native species or change ecosystem function
- 3 - taxa present in the territory that area not known to be invasive here - but have been found to be invasive in other jurisdictions
- 4 - has been reported in the territory. Has not been shown to be problematic, may not persist
- 5 - species that likely don't persist
- 6 - false reports
- 7 - native and introduced populations exist

General Abundance

- C common - widespread established
- F falsely reported,
- P possible but not yet documented
- R rare known from only 1 or two localities,
- U unknown
- X possibly not persistent,
- ? possibly native,

Persistence

- 1=widespread
- 2=local
- 3=not persistent,
- 4=falsely reported
